

Phillip Raich

Austin, Texas • phill.raich@pm.me • 435-630-1389 • [linkedin.com/in/phillip-raich](https://www.linkedin.com/in/phillip-raich)

Professional Summary

Results-driven Software Engineer with 4+ years building secure, scalable enterprise systems at a Fortune 500 automotive company. Proven ability to modernize legacy platforms, adopt emerging technologies, and rapidly adapt to complex engineering challenges. Specializes in full-stack Java / Angular development, Kubernetes / Azure cloud deployments, and AI-native workflows including spec-driven agentic development with LLM tooling. Maintained 100% uptime across mission-critical request-to-pay applications serving thousands of users.

Technical Skills

Languages: Java, TypeScript, JavaScript, C, BeanShell

Frameworks & Build: Angular, Spring Boot, React.js, Node.js, REST APIs, Maven, npm

Cloud & DevOps: Azure, Kubernetes, Red Hat OpenShift, Docker, GitHub Actions, CI/CD

Security & Scanning: Wiz, FOSSA, SonarQube, Dependency Patching, Vulnerability Remediation

Monitoring & Testing: Datadog, Jest, JUnit, Unit & Integration Testing, Production Debugging

Integrations: SAP ESourcing & CLM (OData), Redis

AI & Automation: Cursor IDE, GitHub Copilot, Glean, Ollama, LM Studio, Spec-driven Agentic Workflows

Professional Experience

General Motors • Austin, Texas

Software Engineer • May 2022 – May 2026

- **AI-Native Development:** Leveraged Cursor IDE and spec-driven agentic workflows to refactor legacy enterprise applications, prototype features, and improve applications serving 5,000+ users. Built a native desktop tool entirely with AI assistance that reduced deployment time to legacy systems from 15 minutes to 1 minute.
- **Full-Stack Development:** Co-engineered 5 enterprise Java / Angular applications supporting critical request-to-pay workflows for thousands of internal and external users; leveraged Copilot, Cursor, and Glean to accelerate delivery, debug complex issues, and reduce PR turnaround.
- **Cloud & Infrastructure:** Deployed containerized microservices across Kubernetes, Red Hat OpenShift, and Azure with active/active regional redundancy for disaster recovery.
- **CI/CD & Release:** Built GitHub Actions pipelines for blue/green deployments; reduced manual release risk and improved deployment cadence.
- **Security & Compliance:** Managed vulnerability lifecycle using Wiz, FOSSA, and SonarQube; patched dependencies and refactored code to meet enterprise security standards.
- **Performance & Integrations:** Integrated Redis caching to cut load times by 55%; built middleware integrating SAP ESourcing & CLM with custom backend services.
- **Observability & Uptime:** Instrumented Datadog dashboards and alerts to monitor, debug, and resolve production issues, achieving 100% uptime over 3 consecutive years; maintained 95%+ unit test coverage across all applications.

Master AutoTech • Salt Lake City, Utah

Automotive Technician • Sept. 2020 – May 2022

- **Diagnostics & Repair:** Diagnosed and repaired engine, transmission, electrical, suspension, and HVAC systems to OEM specifications and safety standards.

Education

University of Utah • Salt Lake City, Utah

Bachelor of Science in Computer Engineering • Dec. 2021

Utah State University • Logan, Utah

Associate of Science in General Studies • Associate of Applied Science in Automotive Technology • May 2017

Volunteering & Leadership

Lead Audio Technician, Antioch Austin • May 2022 – Present

Student Body President, USU Eastern • June 2016 – May 2017
